「 C++ introduction 」

You could find here some basic exercises.

NB : you have to use for each modular code in other words : use function!!!

└ Problem 1 ┐

Write a program which allows to compute Area and circumference of a circle. (Input of the function : circumference)

└ Problem 2 ┐

Write a function which allows to find the max and the min of a table.

└ Problem 3 ┐

Write a function which allows to compute the Fibonacci sequence. (Input of the function : rank of the sequence)

└ Problem 4 ┐

Write a function which allows to display in the terminal any multiplication table.

└ Problem 5 ┐

Write a function which allows to compute the truth table of the following operators :

1. and

2. or

3. no

each table will be computed using 3 variable as input.
